

It's vital that districts keep close track of when students are in school and when they are not. ScholarChip's integrated, automated classroom attendance service improves attendance rates and makes taking attendance fast, easy, and cost efficient; desk and door readers make it accurate, every time.

With ScholarChip, teachers gain more class time and administrators find student attendance issues quickly, providing valuable data for better intervention strategies.

## Attendance Services

Classroom Attendance, a Component of the ScholarChip Cloud, is an Integrated School Safety and School Operation Service.

# ScholarChip® Card-based Classroom Attendance

ScholarChip's revolutionary Power over Ethernet (PoE) card reader makes installation easy and cost effective by connecting to existing Ethernet cables that run throughout a school. They can be wall or desk mounted, and process a classroom of students in under a minute.

Students tap their smart ID cards onto a reader as they enter a classroom, and they are automatically registered as on time or tardy.

The teacher's interface displays student photos; a tap changes it from grayscale to full color indicating "present." Teachers can override a tap, change attendance status and easily approve data gathered via our cloud-based management site.

## Features & Benefits:

Automates attendance, saving time and providing reliable timely data

Improves student's timely arrival to their classes

Impacts hall traffic

Increases student accountability

Improves safety

Integrates with all modern student information systems (SIS)

Real-time and historical reporting and dashboards

Power over Ethernet (PoE): easy installation and cost effective

Onboard processing and memory

Native web server

Communicate directly with the ScholarChip security cloud on standard port 443
