

To provide the school security necessary to create a safe learning environment, school administrators must take steps to keep people, who don't belong, from getting inside their facilities. The right kinds of doors at school building entrances and at the entries to offices, classrooms and other areas—can keep unauthorized and unwanted people out of school areas where they don't belong and can deter malicious intent.

ScholarChip® Secure Door Access

The ScholarChip's School Safety and Operations System combines physical access, academic attendance and other campus card-based functions into a true one-card solution. Door access is unified at the database level with the other component of our system.

Provide students and staff access to authorized school areas.

Features & Benefits:

Smart ID-card issuance

Web-based door access management

Access roles may be derived automatically from the Student Information System or other school systems without manual intervention

Fine grained time and door location profiles

Access data reporting available from any PC or web enabled handheld device

Open system technology compatible with any ISO 14443 card or fob

Scales easily to manage a single door to hundreds of doors

Automated lock down via the web or Interactive Voice Response or door buzzer entry

Correlating Services:

Operator manned station

Self-service station

Counter-mounted station

Wheeled Visitor Management kiosk
