

Schools that are proactive about security know how important it is to identify every school visitor. Understanding the status of each visitor and having the ability to manage status changes is a critical part of campus safety. For ScholarChip, Visitor Management is not a stand-alone service. It is designed specifically for use in K-12, and is a logical extension of our work securing the entrance to schools with our automated Building Attendance.

ScholarChip® Visitor Manager

As a unified component of our School Safety and Operation System, ScholarChip Visitor Manager integrates with Student Information Systems to manage student pick-up and custodial issues. Administrators have access to visitor data and can manage a visitor's status from the web 24/7. Our visitor stations rapidly process visitors, capture staff-time and attendance, and issue key-chain style fobs to frequently visiting parents. We know that no two schools operate alike; for flexibility, our visitor service is available in several software and hardware formats.

Easy to operate manned station, counter-mounted

Available on a PC Counter Mounted Station Wheeled Station

Features & Benefits:

Secures adult visitor entry to the schools, complementing our Building Attendance Service
